

# FerriSeal

**SPRAYABLE PROTECTIVE METAL  
SEALANT**

## Product Overview

FerriSeal is used as a sealant for metal compounds and alloys to protect from ultraviolet light, dust, abrasion, erosion and rust.

FerriSeal is used for even coverage over large areas. It is progressively applied using a hand-held spray gun or brush to a range of thicknesses to provide a seamless finish and sets within a few hours. Once applied, FerriSeal Quick Set becomes a completely waterproof, durable and highly flexible membrane strong enough to last for years in the harsh Australian climate.

FerriSeal Rapid Build is used as an initial coverage system over joints, penetrations and other substrate imperfections. As it dries slower than Quick Set, it is applied to surfaces with a brush, roller or spray system and facilitates the bonding of geotextile fabric to the surface to create a membrane. Quick Set is then often applied over the top to provide a seamless finish. Quick Set can also be used as a two pack application for both residential and commercial purposes.

FerriSeal Bulk Build is used as a standalone solution to repair and seal damaged, cracked or leaking areas where a more viscous product is required to ensure that the application dries properly. Bulk Build complements the LRM Products' range by sealing extensive damage prior to Rapid Build and Quick Set applications. Bulk Build is applied to problem areas typically using a trowel.

## Quick Facts

- Allows for thicker coverage of areas
- Spray on application provides the shortest and most efficient application time
- Fast curing
- Excellent surface adhesion – including to damaged areas
- Excellent resistance to temperature variations
- Excellent sealing properties (leak proof)
- Resistant to ultraviolet light
- Can stretch 850% and completely recover using its memory technology
