

TerraSeal

**SPRAYABLE HIGH-GRADE LAND
SEALANT**

Product Overview

TerraSeal is a highly versatile sealant that is designed to conform to, line and seal any large earth surface. TerraSeal is most often used in combination with geotextile fabric to form a ground cover that is both water proof, highly puncture resistant, and resistant to ultraviolet light. TerraSeal is a cost effective way to provide long term lining or sealing of land areas to be used for ponds, weirs, tips, land fill, dams and similar earth structures.

TerraSeal Quick Set is used for even coverage over large areas. It is progressively applied using a hand-held spray gun to a range of thicknesses to provide a seamless finish and sets within a few hours. Once applied, TerraSeal Quick Set becomes a completely waterproof, durable and highly flexible membrane strong enough to last for years in the harsh Australian climate.

TerraSeal Rapid Build is used as an initial coverage system over joints, penetrations and other substrate imperfections. As it dries slower than Quick Set, it is applied to surfaces with a brush, roller or spray system and facilitates the bonding of geotextile fabric to the surface to create a membrane. Quick Set is then often applied over the top to provide a seamless finish. Rapid Build can also be used as a two pack application for both residential and commercial purposes.

Quick Facts

- Allows for thicker coverage of areas
- Spray on application provides the shortest and most efficient application time
- Fast curing
- Excellent surface adhesion – including to damaged areas
- Excellent resistance to temperature variations
- Excellent sealing properties (leak proof)
- Resistant to ultraviolet light
- Can stretch 850% and completely recover using its memory technology
