

Vehicle Underbody

Four Wheel Drive Vehicles

LITRES:

3.5L per 4x4

PROPERTIES:

Sound Deadening, Stone Chip Proofing, Rust Protection

TOOLS:

Body deadening spray gun, Air Compressor, Masking Tape, Safety Glasses, Gloves, Waterblaster

PRODUCT USED:

LRM Product's Carriage Coat

The Australian outback and coastline are some of the toughest and most variable terrains a vehicle will experience, from the bush to the beach and from water to the snow. Even daily driving can have a negative impact on a vehicle underbody.

LRM Products have developed a coating that protects your vehicles underbody from stone chip damage and rust as well as reducing road noise. LRM CarriageCoat is easy to apply and the average vehicle will require between 3-5 litres of CarriageCoat, which is half what you might expect to use with other protective coatings. Being water based, rather than solvent based (VOC Free), CarriageCoat is safe to apply.

LRM Products' CarriageCoat can be applied by using an air compressor and a schultz spray gun. It is easy to do it yourself.

The final product provides a vehicle with a completely waterproof, durable and highly flexible membrane that will prevent further stone chip damage and rust. CarriageCoat is superior in comparison to competing products due to its excellent adhesion and elastomeric properties.

LRM Products' CarriageCoat offer the following distinct advantages over competing products:

- Excellent adhesion to dated underbodies
- Excellent resistance to temperature variations
- Excellent sealing properties (leak proof)
- Efficient and short application time (per m²) and short curing time
- Reduction in time off the road (during and post application)
- Environmentally friendly, non toxic with no VOC's
- Certified to AS/NZS 4020:2005 for Potable Water
- Excellent elongation and recovery properties (over 850%)
