

Mapleton Residential Water Tank

Mapleton Residential Water Tank

WORKS COMPLETED:

August 2013

CLIENT:

Resident of Mapleton

LOCATION:

Mapleton, QLD

PRODUCT COVERAGE:

92sqm @ 2mm

TYPE OF CONTRACT:

Primary Contractor

Mapleton is a small town in Queensland's Sunshine Coast hinterland. It is well known for its 180 degree panoramic views of the Sunshine Coast.

Aged but structurally sound concrete water tanks that leak on residential properties all over Australia are often being replaced by expensive new polymer tanks. The owners also incur the costly process of demolishing and removing the old concrete tanks.

The more economical option is to apply VersEseal Quickset membrane that is potable water approved. Seamless VersEseal membranes are applied using paint brushes, rollers and an airless spray pump, increasing the life of a concrete tank. In Mapleton the LRM Products team applied a VersEseal Quickset membrane to an area of 92 square metres. Works were completed within 4 days with a 10 year warranty provided for the project.

VersEseal Quickset was used under these circumstances due to its ability to:

- Completely seal and waterproof the concrete tank
- Adhesion to the surface
- Minimal down time of the property's only supply of water
- Repair any small mini fissure
- Certified to AS/NZS 4020:2005 for Potable Water
- Environmentally friendly products

AS/NZS 4020:2005 | SS210 Certified
